

Problem: Netbeans wont create any kind of java project.

Given issue:

To fix the problem, we have to install the proprietary version of the java jdk.

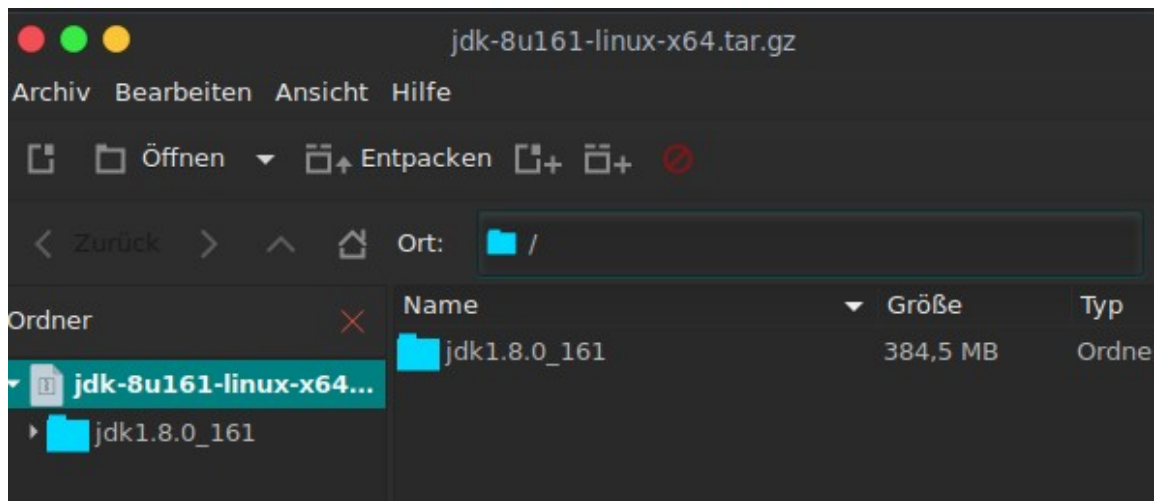

Visit:

<http://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html>

to download the latest JDK Version. In this case it is JDK 1.8.0.

Extract the downloaded archive to your favorite location.

For the next step, you need to use the Midnight Commander. You can get this program, by typing `sudo apt-get install mc`.

Do `sudo mc`.

Navigate to the destination of your unzipped jdk-Files (left) and `/usr/lib/jvm/` (right).

Copy the files to `usr/lib/jvm` (F5 Key).

For the last step, we have to change the present JDK path in the `netbeans.conf` file. Visit your installation directory of netbeans. In this case the path is:

`<username>/netbeans/etc/netbeans.conf` and change the present path to the filename of your recently copied jdk version.

```

1 # It can be overridden on command line by using --jdkhome <dir>
2 # Be careful when changing jdkhome.
3 # There are two NetBeans launchers for Windows (32-bit and 64-bit) and
4 # installer points to one of those in the NetBeans application shortcut
5 # based on the Java version selected at installation time.
6 #
7 netbeans_jdkhome="/usr/lib/jvm/jdk1.8.0_161"

```

For now, the given problem should be fixed. :-)
